User Story: Age Verification

As Website User: **I want to** do age verification
So that I can access the website's content.

Acceptance criteria :

1- As a user I have to enter the whole date of birth in DD/MM/YYYY format.
2- The user has to be a Minimum of 18 years old to be able to access the website content.
3- Date fields should only accept numbers as the following

DD: should represent days (1-30/31) + No negative number or special characters.
MM: should represent Months (1-12) + No negative numbers or special characters.
YYYY: should represent years (1900-2005) + No negative numbers or special characters.

4- The user should be redirected automatically to the website content if the user's age is 18+ years.
5-The user should be blocked from redirection to the website content if the user's age is below 18 years old.
6- A session cookie will be set when the user completes the Age Gateway verification to allow the user direct access to all site pages.
7- this session will be valid until the browser is restarted.
8-If the user tries to access any pages on the site directly and the cookie is not present, the user will be shown the Age Gateway.

Examples:

Happy Flows:
- **If the user's birthdate is: 10-12-1990** then the user should be able to access website content successfully.
  The session cookie should be live until the browser is terminated or restarted.

- **If the user's birthdate is: 10-3-1995** (the system automatically will correct it to 10-03-1995) then the user should be able to access website content successfully.
  The session cookie should be live until the browser is terminated or restarted.

Unhappy Flows:

- **If the user's birthdate is: 10-31-1995** then the user should be able to see an error message that says 'invalid Month Input', The user shouldn't be able to access website content, no session cookie value set (the user still has to pass the age verification step before accessing website-content).
